

# Maths week beginning 22/02/21

## Learning objectives

Monday: To identify parts of a circle

Tuesday: 10410

Wednesday: To calculate the area of a triangle

Thursday: To calculate angles on a straight line

Friday: To calculate angles around a point

# Monday

L.O: To identify parts of a circle

## **First things first...**

There are a few changes this week to where you need to save your work.

Match the name of the part of the circle to the correct diagram.

Diameter

Circumference

Radius

Centre

Match the name of the part of the circle to the correct diagram.

Remember that the radius and the diameter both meet the centre

The radius is a line from the centre of the circle to the edge.

The diameter is a line from one side of the circle to the opposite side which passes through the centre.

The circumference is the perimeter of a circle.

The radius of a circle is half the diameter.

The diameter of a circle is double the radius.

There are different ways to show the **diameter** and the **radius**.

- 1) Jack says this is the diameter of the circle.  
Kia says this is the radius of the circle.

Who do you agree with?  
Explain your answer.

Jack

Kia

1) A plate has a radius of 12cm. Find the diameter.

2) A tyre has a diameter of 1m. Find the radius.

$$1) 12\text{ cm} \times 2 = 24\text{ cm}$$

$$2) 1\text{ m} \div 2 = 0.5\text{ m} \\ = 50\text{ cm}$$

Can you fill in the missing numbers?

$$1 \text{ cm} = \quad \text{mm}$$

$$1 \text{ m} = \quad \text{cm}$$

$$1 \text{ km} = \quad \text{m}$$

Can you fill in the missing numbers?

$$1 \text{ cm} = \quad 10 \quad \text{mm}$$

$$1 \text{ m} = \quad 100 \quad \text{cm}$$

$$1 \text{ km} = \quad 1,000 \quad \text{m}$$

## **Task**

- 1) Fill in your Maths diary on purplemash.
- 2) Pick either task 1 or 2 to complete.

# Task 1 (Less challenging)

Complete the table

Radius	Diameter
10 cm	
20cm	
23cm	
	98 cm
	44 cm
	70 cm
45 cm	
	8cm
63cm	

## Task 2 (More challenging)

- 1) The diameter of a pizza is 43cm. What is the radius in cm?
- 2) The radius of a coin is 5mm. What is the diameter in cm?
- 3) The diameter of a wheel is 0.8m. What is the radius in m?
- 4) The diameter of Saturn's rings is 270,000km. What is the radius in km?
- 5) The radius of a frisbee is 18cm. What is the diameter in mm?
- 6) The radius of a biscuit is 23mm. What is the diameter in cm?

Extra challenge: Pick two questions and write the diameters in mm, cm, m and km.

## Challenge

The number 'pi', written  $\pi$ , is used to explain the relationship between a circle's diameter and circumference. Find out what pi is, round it to two decimal places, and use it to approximate the circumference of three of the circles you have looked at today.

## Challenge Hint

Circumference =  $\pi$  x diameter

The first 12 digits of pi are  
3.14159265358.

# Task 1 (Less challenging)

Complete the table

Radius	Diameter
10 cm	20cm
20cm	40cm
23cm	46cm
49cm	98 cm
22cm	44 cm
35cm	70 cm
45 cm	22.5cm
4cm	8cm
63cm	126cm

## Task 2 (More challenging)

- 1) The diameter of a pizza is 43cm. What is the radius in cm? 21.5cm
- 2) The radius of a coin is 5mm. What is the diameter in cm? 1cm
- 3) The diameter of a wheel is 0.8m. What is the radius in m? 0.4m
- 4) The diameter of Saturn's rings is 270,000km. What is the radius in km? 135,000km
- 5) The radius of a frisbee is 18cm. What is the diameter in mm? 360mm
- 6) The radius of a biscuit is 23mm. What is the diameter in cm? 4.6cm

Extra challenge: Pick two questions and write the diameters in mm, cm, m and km.

# Tuesday

## 10410 on purplemash

Wednesday

L.O: To calculate the are of a triangle

What is the area of this rectangle?

**Wednesday**

L.O: To calculate the are of a triangle

What is the area of this rectangle?

$$8\text{cm} \times 12\text{cm}$$

$$= \underline{96\text{cm}^2}$$

For a right angle triangle, we can use this formula:

$$\text{area} = \frac{1}{2} \times \text{base} \times \text{height}$$

For a right angle triangle, we can use this formula:

$$\text{area} = \frac{1}{2} \times \text{base} \times \text{height}$$

$$8\text{cm} \times 12\text{cm}$$

$$= 96\text{cm}^2$$

So the area of a triangle with a height of 8cm and base of 12cm is

$$\frac{1}{2} \times 96\text{cm}^2 = 48\text{cm}^2$$

Use the area of the rectangle to calculate the area of the triangle.

$$\text{Area} = \boxed{32} \text{ cm}^2$$

$$\text{Area} = \boxed{16} \text{ cm}^2$$

Calculate the areas of the triangles below and circle the triangle that has a different area.

$$\text{area} = \frac{\text{base} \times \text{height}}{2}$$

The area of the triangle is  $36\text{cm}^2$ .  
Using the formula, find the length of the missing side.

$$\text{area} = \frac{\text{base} \times \text{height}}{2}$$

$$36 = \frac{6 \times b}{2}$$

$$36 = 3b$$

$$12\text{cm} = b$$

Write your answer in cm.

$$\text{area} = \frac{12 \times 6}{2}$$

$$= \frac{72}{2}$$

$$= 36\text{cm}^2$$

We can  
use an  
inverse  
operation  
to solve  
this!

**Reminder:**

$$10\text{mm} = 1\text{cm}$$

## Task

- 1) Answer the Maths question on purplemash
- 2) Choose one of the sheets and complete the questions. You have the option of least challenging, more challenging and most challenging, so decide how confident you feel and go from there.

## Thursday

### L.O: To calculate angles on a straight line

Match these facts to the correct image.

The image shows four circles, each divided into sectors by black lines. The first circle is divided into four equal quadrants, with the top-right quadrant shaded yellow. The second circle is divided into four equal quadrants, with the top-right and bottom-right quadrants shaded yellow. The third circle is divided into four equal quadrants, with the top-right, bottom-right, and bottom-left quadrants shaded yellow. The fourth circle is divided into four equal quadrants, with all four quadrants shaded yellow.

360°

1 right angle

3 right angles

4 right angles

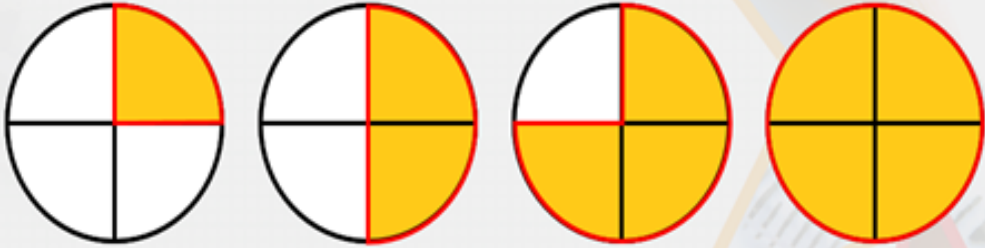

90°

270°

180°

2 right angles

Match these facts to the correct image.

The image shows four circles, each divided into sectors by black lines. The first circle has one 90-degree sector shaded yellow. The second circle has two 90-degree sectors shaded yellow. The third circle has three 90-degree sectors shaded yellow. The fourth circle has four 90-degree sectors shaded yellow.

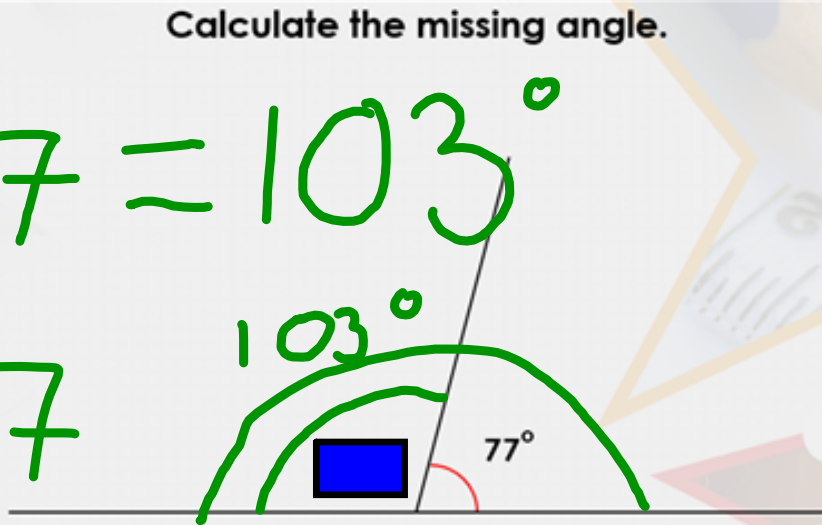

$90^\circ$	$180^\circ$	$270^\circ$	$360^\circ$
1 right angle	2 right angles	3 right angles	4 right angles

Angles on a straight line add up to  $180^\circ$ .

You can think of this as doing half a turn.

Calculate the missing angle.

$$180 - 77 = 103^\circ$$
$$103 + 77 = 180$$

Angles not drawn to scale.

$$\begin{array}{r} 49 \\ 78 \\ \hline 127^\circ \\ \hline 1 \end{array}$$

Work out the missing angle from the two angles given.

$$\begin{array}{r} 180 \\ -127 \\ \hline 053 \end{array}$$

Angles not drawn to scale.

Rhys is measuring angles on a straight line.  
He says:

There are three angles on the line. One is  $100^\circ$ , one is  $15^\circ$  and the other is  $55^\circ$ . 170

Could he be right? Explain how you know.

## Task

- 1) Answer the Maths question on purplemash
- 2) Choose one of the sheets and complete the questions. You have the option of least challenging, more challenging and most challenging, so decide how confident you feel and go from there.

**Friday**

**L.O: To calculate angles around a point**

How many degrees is the angle on a straight line?

Angles on a straight line add up to  $180^\circ$ .

Angles around a point add up to  $360^\circ$ . You can think of this as doing a full turn.

$$\begin{array}{r} 92 \\ 63 \\ \hline 155 \\ 155 \\ 122 \\ \hline 277^\circ \end{array}$$

$$277 + a = 360$$

$$\begin{array}{r} 15 \\ 28 \cancel{6} 0 \\ 277 \\ \hline 083^\circ \end{array}$$

Use the hints to work out the angles.

Four angles make up a full turn.

30° ✓

120° ✓

90° ✓

120° ✓

Angle A is a third of a right angle.

Angle B is 4 times angle A.

Angle C is a right angle.

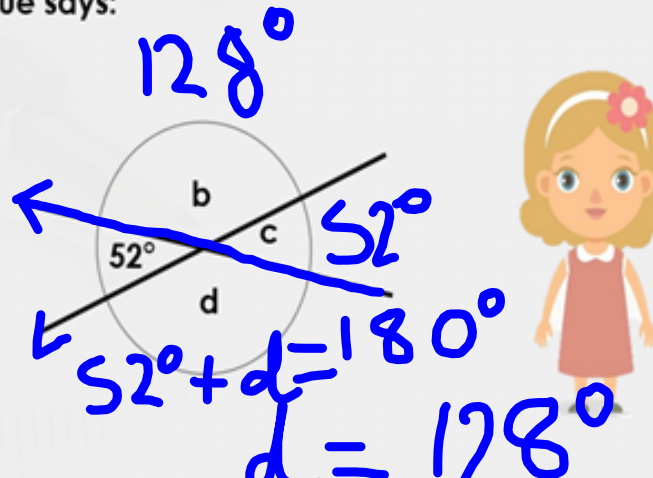

Angle D is equal to angle B.

What are the 4 angles?

360°

Sue says:

I think that angle d measures  $154^\circ$ .

Is Sue correct? Explain why.

## Task

- 1) Answer the Maths question on purplemash
- 2) Choose one of the sheets and complete the questions. You have the option of least challenging, more challenging and most challenging, so decide how confident you feel and go from there.
